Allowable Subject Matter

The following is an examiner's statement of reasons for allowance: the prior art closest to the present invention, Lu et al (USPGP 20060048634) discloses a method of beat analysis which comprises re-sampling an audio stream so that it is composed of blocks and applying Fourier Transformation to each of the blocks. Claims 1-16 are allowable over the prior art as they recite, and the prior art does not teach, deriving a first vector from each of the transformed blocks, wherein components of the first vector are energy summations of the block within a plurality of first sub-bands, applying auto-correlation to each sequence composed of the components of the first vectors of all the blocks in the same first sub-band using a plurality of tempo values, wherein, for each sequence, a largest correlation result is identified as a confidence value and the tempo value generating the largest correlation result is identified as an estimated tempo, comparing the confidence values of all the sequences to identify the estimated tempo corresponding to the largest confidence value as a final estimated tempo, and aligning the soundtrack with image transition using indices yielded from music analysis based on the final estimated tempo.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
